THE LATEST TECHNOLOGY IN LIFTING AND TIGHTENING

Ultherapy® from Ulthera®

Dr Nettle is the only Australian specialist conducting the clinical trial of a brand new technology for lifting, tightening and toning skin non-surgically. Ultherapy is a unique application of poven ultrasound technology for non-surgical skin lifting, tightening and firming, with an 89% clinically significant result in just one in-office treatment.

Given Dr Nettle's extensive experience, it's no surprise that he has been asked to trial this cutting edge technology. Ulthera® treats the deep layers of skin, where cells are formed and leaves the surface unaffected. There is an immediate effect as well as a progressive improvement as the maximum lift is achieved in around 90 days post treatment.

This is a unique combination of ultrasound imaging [allowing the practitioner to 'see' up to 8mm into the skin] and ultrasound energy, which precisely delivers acoustic sound waves deep into the skin to maximise natural collagen production. Acoustic imaging enables the layers of soft tissue under the skin to be visible, allowing for precision treatment.

The technology was originally developed for tumour ablation in liver cancer patients in collaboration with Johnson & Johnson, when the lifting effect was noticed, because of the increased collagen production in the skin. Treatments require no preparation, are generally well tolerated and require little or no recovery.

For information, please contact the clinic on **02 9387 3900**

Dr Benjamin Norris

THE POST BABY REJUVENATION

Beautiful, natural-looking breasts.

Dr Norris, Silkwood's resident breast and body specialist, has experienced first hand the significant increase in mothers looking to recoup the pre-baby body. Our specialty breast site [www.breastsurgery.net.au] contains information about the choices available.

Here is just one excited patient result.

BEFORE

AFTER

42yrs with 4 children - all breastfed. This patient achieved a weight loss of 15Kg in the year prior to surgery, and consequently loss of volume, shape and sagging of the breasts. Her preoperative cup size C became the desired DD with a naturally large look using tear-drop implants, full-height and extra-projection 360g.

NEW PROGRAM

Sharing your experiences can be very rewarding. If we have satisfied your expectations, this new program may interest you. When you visit Silkwood Medical and complete a treatment or procedures, you will receive a 'refer a friend card'. By referring a friend to us, we will thank you with a concession on your next non-surgical treatment with us, including anti-wrinkle injections, IPL, dermal fillers, clinical facials etc.

Refer 3 friends and your next non-surgical treatment is on us!

MEET THE TEAM

Maureen Cole - Dip BTh, ITEC, CIDESCO IFA, AABth

Maureen is a paramedical aesthetician with over 20 years experience in skin.

Maureen Cole

With years of experience with IPL and laser for hair removal and photo-rejuvenation, [including vascular lesions and pigmentation] Maureen's clients tell us the outcomes are very satisfying. It must be experience that makes the difference, because the ability to individually tailor a program takes skill, experience and familiarity with the equipment as well as the many skin types that present at the clinic.

Maureen is also highly experienced in Manual Lymphatic Drainage – excellent for pre and post operative care, MLD is a gentle massage that engages the body's own healing powers. It stimulates blood flow and assists to eliminate toxins. So for inflammation, blotchy skin, bruising and the healing process in general, this relaxing and totally pain free treatment is highly recommended.

See Maureen for skincare procedures including clinical / medical facials, peels, micro-dermabrasion, profractional laser resurfacing, micro laser peels... a long list of non-surgical, non-invasive treatments for sensational looking, glowing skin. So call for an appointment.

Silkwood Medical Reception

WHERE WE ARE

Your first consultation and many of the highly favoured treatments available for cosmetic enhancement are available in the comfort and privacy of our Bondi Junction clinic.

Most of these outstanding results are delivered in the calm of our private clinic, in the quiet end of Bondi Junction.

Just minutes away from the busy shopping district and the hub of bus and train stations, but you would never know that Silkwood Medical was tucked away in an office block, surrounded by metered street parking and free council car parks.

PUMP UP THE VOLUME

Over time the face deflates and descends

Loss of facial volume occurs over time or with significant weight loss, resulting in a more aged appearance - skin sagging, lines, folds and creases as well as loss of definition of facial features. Fortunately, there is a proven option to remedy volume loss in the mid face.

Latest technology allows us to inject resorbable gel fillers with extremely elastic properties to plump up sagging areas and rejuvenate the appearance, creating a natural-looking, subtle result that lasts 9-12 months.

You have seen this cutting-edge product on TV and in the recent hit series of *Ten Years Younger In Ten Days*. Coupled with the extensive experience of our injectors, Marilyn and Ginelle, this treatment delivers superior outcomes by replacing any volume lost from the mid face. And experience matters when we look for that subtle, natural-looking change to our appearance.

Treatment takes around 30 minutes, there is no preparation required, and little or no downtime.
